Professional Summary

Statistics and Data Science graduate from UFPR, currently pursuing an M.Sc. in Computer Science at UFPR's Graduate Program in Informatics, with a research focus on Computational Intelligence. Experienced in statistical consulting, predictive modeling, process automation, dashboard development, and AI applications. Works on projects in healthcare and agribusiness, turning data into practical solutions for research and business.

Education

M.Sc. in Computer Science — Graduate Program in Informatics (PPGINF), UFPR 2026 – 2027

Research area: Computational Intelligence.

B.Sc. in Statistics and Data Science — Federal University of Paraná (UFPR) 2022 – 2025

Experience

IoTag (John Deere Partner) — Mid-Level Data Scientist March 2026 – Present

- Developed an interactive platform for analyzing agricultural machinery CAN bus data, automating and speeding up a workflow previously performed manually in Python.
- Built an interface for configuring time-series analyses and visualizing machine routes on maps.
- Process telemetry data using SAE J1939 and ISOBUS standards, and develop machine learning models for agricultural machinery and IoT data.
- Structure and query a SQL database containing agricultural machinery data.
- Integrated an AI agent into the platform to help employees use the tool and analyze its data.

Statistical Consulting — Colorectal Cancer 2025

- Developed machine learning models for cancer classification.
- Conducted a survival analysis using a Cox proportional hazards model to assess symptoms and acute complications as prognostic factors in colorectal cancer.

Academic Projects and Research

Machine Learning in Healthcare Project — USP 2024 – Present

- Develope a web application utilizing Machine Learning and AI for preliminary schizophrenia screening, streamlining and accelerating the triage process.
- Processed and analyzed complex, unstructured data extracted from clinical consultation videos.
- Built and trained Machine Learning models for schizophrenia classification using Scikit-learn and PyTorch.
- Utilized `Python` to implement AI automation and Natural Language Processing (NLP) workflows.
- Featured in national television media coverage (Band TV), highlighting the project's technological and social impact on healthcare.

PET Statistics Program — UFPR 2022 – 2025

- Served as a member of Brazil's Tutorial Education Program (PET), engaging in academic research, teaching, and extension activities.
- Organized workshops and short courses on R, data visualization, and related topics for undergraduate students.
- Contributed to both practical and teaching-oriented work in applied statistics.

Competitions

Hackathon — 3rd Renault Transformation Day 2025

- Collaborated with a team to develop a solution for detecting and classifying legal disputes in the Procurement Challenge.
- Placed first in the Procurement case and third overall, representing UFPR.

Publications

Predicting transition to psychiatric disorders in clinical high-risk for psychosis subjects using machine learning and facial features 2026

- Loch, A. A.; Queluz, F. H.; Wavrzenczak, B.; et al. *Schizophrenia Research*, v. 295, p. 161–169.
- DOI: 10.1016/j.schres.2026.06.001

Technical Skills

Languages:	R and Python
Machine Learning & AI:	Scikit-learn, Pytorch, TensorFlow, LLMs, NLP, Agentic AI
AI Frameworks:	Agno, CrewAI, LangChain
Databases:	SQL
Reporting:	Quarto and R Markdown
Dashboards:	Shiny
Tools:	Git, TidyVerse, n8n, API development

Languages

- Portuguese: Native
- English: Fluent

Conferences and Events

- 25th SINAPE (2024) — Fortaleza
- 69th RBras (2025) — Vitória
- 2nd SouthStat Meeting (2025) — Santa Maria
- 3rd Renault Transformation Day (2025) — São José dos Pinhais
